

Branches

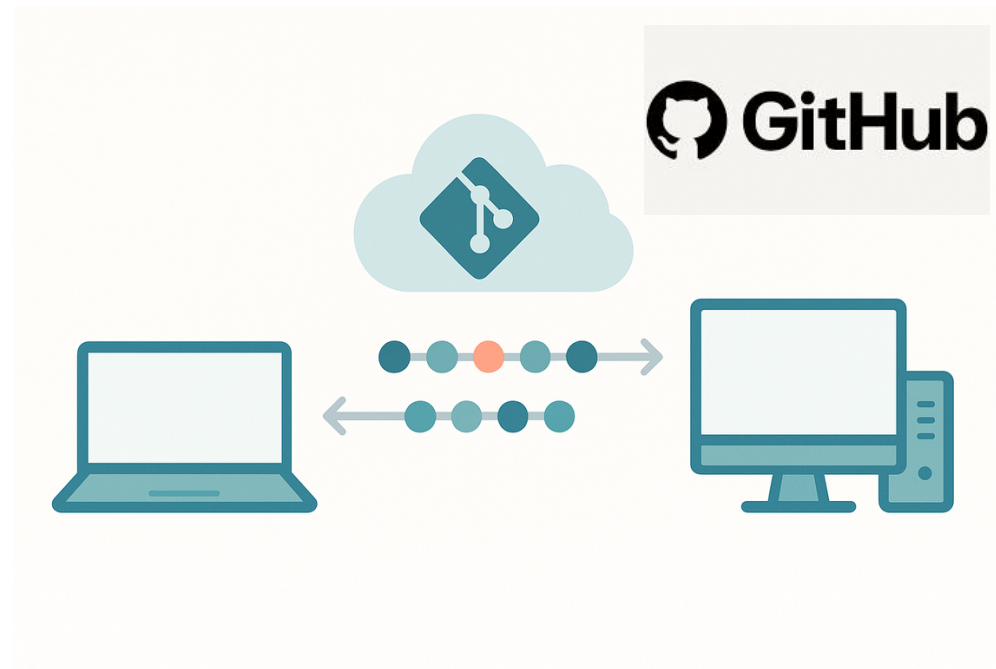

Create branch

```
git switch -c my-branch-name
```

Switch to existing branch

```
git switch my-branch-name
```

Push to Github

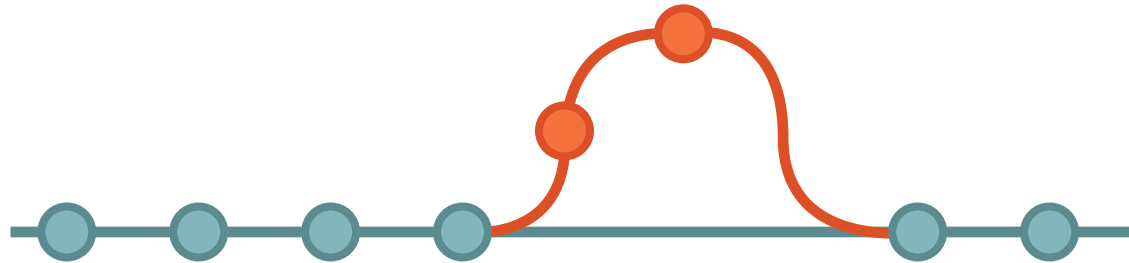

List remotes

```
git remotes -v
```

Push commits to remote

```
git push
```

Commit and merge

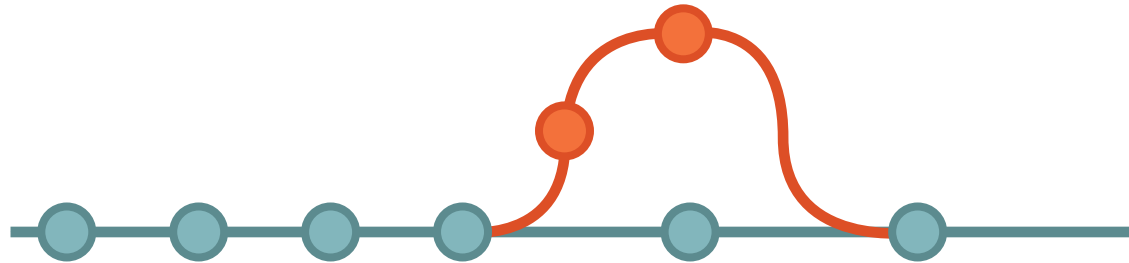

Add and commit changes in the branch

```
git add docs/config-checklist.md  
git commit -m "Add config checklist documentation"
```

Switch to existing branch and merge

```
git switch main  
git merge my-branch-name
```

Merge with conflict

Identify conflicted files

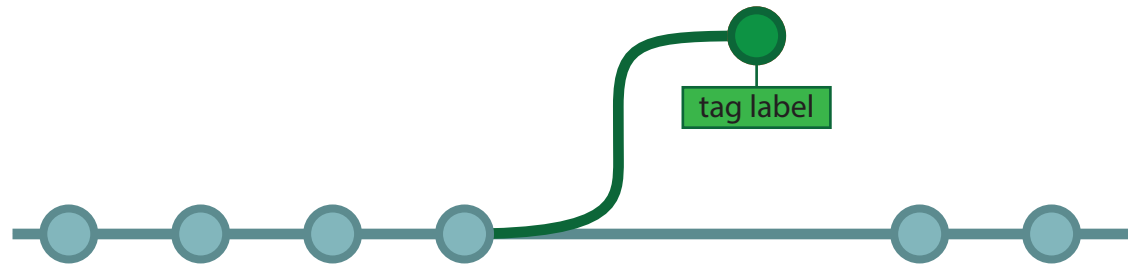

```
git status
```

Open conflicted files. Look for Git's conflict markers:

```
<<<<<< HEAD: Your local changes.  
=====  
>>>>>> [branch-name]: The changes from the incoming branch.
```

Resolve and save

Tags

Tag current commit

```
git tag v1.2-paper-figures
```

Tag with additional message

```
git tag -a v2.3-revised -m "Submitted Revision"
```

Push tags to web

```
git push origin --tags
```
